

### Get to know your Mini Hub

Note: The battery LED will light up when the device is powered on.

### If your hub isn't responding

Hold the power button down for ten seconds and it will reboot.

### Having problems with your Mini Hub?

Just reset your Mini Hub and you'll be back up and running in no time. Use a paperclip or blunt pin to gently press the reset button.

### We've set light parental controls

You can change these by logging in to [www.bt.com/mybt](http://www.bt.com/mybt) and heading to the BT Plus page.

### Lost your password card?

Don't worry, just remove your Mini Hub's back cover and you'll find a sticker showing the network name and password.

## Meet your Mini Hub

### We'll keep you connected

As a BT Plus customer, if you're ever without a broadband connection we'll activate this Mini Hub.

It can connect up to twenty devices to free unlimited data – so you'll stay online.

### We're busy sorting your broadband

We'll let you know when your broadband's up and running. And, once you reconnect your devices to your Home Hub, we'll turn off the data to your Mini Hub.

### This Mini Hub's yours to keep

Keep it somewhere safe. If you need your Mini Hub in the future, contact us. We'll be ready to reactivate it.

## Let's get started

### Turn it on

Plug in the Mini Hub to start charging its battery, and switch it on.

The signal indicator light will turn solid blue when it's connected to the network and you have a good signal.

### Connect your devices

In the wi-fi settings menu on your device, look for the name of your Mini Hub. You can see it on the password card.

Once you've clicked 'connect', enter the password for your Mini Hub. This is also on the password card. And there you go. You're ready to get online with free unlimited data.

### To charge your Mini Hub

Use the Micro USB cable or other suitable charger. Once it's charged, you're ready to go. Keep the power button pressed down for a few seconds to turn your Mini Hub on.

### Keeping it plugged in for a long time?

It's best to remove the battery – otherwise the Mini Hub might overheat.

The power indicator will tell you how much battery is left:

- a solid blue light = you have enough power
- a flashing blue light = it's charging
- a solid red light = the battery's lower than 20%
